(54) DISK DEVICE

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a disk device of an L/U system, which has higher shock resistance.

SOLUTION: The device is provided with a disk, a head slider having at least one head element recording information to the disk and/or reproducing information from the disk, an arm member supporting the head slider at one end part, an actuator for turning the arm member in a direction horizontal to a disk surface with a horizontal turn shaft as a center, a load generating means generating a load energizing the head slider in a surface direction of the disk and a lifter means which is arranged on a side outer than a peripheral edge of the disk, which abuts on a head slider support face side of the arm member and separates the head slider from the disk surface at the time of non-operation.
